THE BONNE BAY BIOLOGICAL FIELD STATION IS LOCATED IN THE COMMUNITY OF NORRIS POINT, IN THE CENTRE OF THE BONNE BAY AREA, IN THE MIDDLE OF GROS MORNE NATIONAL PARK. THE MOST DIVERSE ARRAY OF MARINE HABITATS AND ORGANISMS IN ATLANTIC CANADA INHABITS THE WATERS IN THE VICINITY. EXISTING FACILITIES INCLUDE: AN AQUARIUM AREA WITH C.40 AQUARIUM TANKS, PUMPS AND ACCESSORIES FOR TWO DEPTHS OF SEAWATER INTAKES, AN AERATION SYSTEM, A SEAWATER GRAVITY FEED HEADER TANK, BOATING SAFETY AREA (LIFE JACKETS, SURVIVAL SUITS, BOATING SAFETY KITS, ANCHORS, ROPES, OARS, FLARES, CHART AND NAVIGATIONAL EQUIPMENT, ETC.), FIELD SAMPLING EQUIPMENT (NETS, TRAPS, SEINES, WATER SAMPLE BOTTLES, METER BLOCK, ROPES, FLOATS, SAMPLE BAGS, SOUNDERS, GPS, ETC.), DIVING EQUIPMENT (TANKS, REGULATORS, COMPRESSORS, LIFE VESTS, MASKS, SUITS, KNIVES, UNDERWATER COMMUNICATIONS, ETC.), SINKS, SHOWER, BUCKETS, SCREENS, ETC. CURRENT RESEARCH INCLUDES: COASTAL ECOSYSTEMS RESOURCE EVALUATION AND CONSERVATION, PHYCOLOGY: SEAWEED ECOLOGY AND BIOGEOGRAPHY, MARINE ENVIRONMENTAL IMPACT AND SEA URCHIN AQUACULTURE AND ECOLOGY.

PRODUCTS AND SERVICES

My program at Memorial University of Newfoundland is composed of both fundamental and applied research. The fundamental area of interest is applying theories of behavioural ecology to studies on larval and juvenile fishes. I am involved in examining the development of foraging and predator-avoidance behaviour using the foraging of threat-sensitive foraging, and examining the functional significance of kin-recognition in two species of salmonid fishes. The applied area of research is aquaculture. Interests in this area are focused on developing new species for cold-water aquaculture and improving culture techniques for various cold-water species.

PRODUCTS AND SERVICES

My primary interest is in comparative physiology of marine organisms including echinoderms and fish. Recently I have concentrated on aspects of fish reproduction, including variations in gametogenesis, the control of early oogenesis and spermatogenesis and the interaction of nutrition and reproduction. This has relevance to aquaculture both at the broodstock level and in developing an understanding of precocity (early sexual development) undesirable in cultured fish. Publications of interest to the wild fishery and aquaculture include:
Maddock, D.M. & Burton, M.P.M., 1998 Gross and histological observations of ovarian development and related condition changes in American plaice (Hippoglossoides platessoidess). In press J. Fish Biol.
Rideout, R., Maddock, D.M. & Burton, M.P.M., 1998 Oogenesis and the spawning pattern in Greenland halibut Reinhardtius hippoglossoides (Walbaum), from the Northwest Atlantic. Accepted J. Fish Biol. 9th Sept. 1998
Burton & Flynn 1998 Differential post spawning mortality among male and female capelin (Mallotus villosus Muller) in captivity. Can. J. Zool. 76: 588-592

PRODUCTS AND SERVICES

The mission of C-ASD is to enhance the competitiveness of the aquaculture and seafood processing sectors, by working with industrial clients in areas of applied research, product and process development, technology transfer and advisory services, and support for education and training. The aquaculture facility has a floor area of 500 square meters, state-of-the-art water treatment and biofiltration. The 55 cubic meters of tank space can be configured into a range of environmental zones in terms of physical and chemical hydrological conditions. An additional 54 cubic meters of rearing capacity in an external tank field is planned. The marine and freshwater systems consist of six independent recirculating systems, using laminar flow and fluidized bed biofilters, low head oxygenation, temperature control, a monitoring / alarm system and emergency electrical back-up. Other key features of this facility include agal and rotifer culture systems, quarantine laboratory, and nutritional analysis laboratory. The C-ASD also operates a processing plant, which is federally licensed for the production of fresh, frozen and canned seafood products. This facility includes a food engineering lab, test kitchen, taste panel room, storage facilities for chilled and frozen products, blast freezer, plate freezers, smokers, filling equipment, vacuum sealers, can seaming equipment, dry extruder, steam kettles, skin wrap machine, and other fish and food processing equipment. C-ASD capabilities include: fish husbandry, diagnosis of bacterial disease in fish, farm-site selection, bivalve larvae and spat monitoring, development, production and analysis of feeds, commercial scale feeding trials, development of new seafood products, producing pilot scale quantities of products, design and cost information for hatcheries, design of grow-out systems for fish and shellfish culture,optimizing shellfish farm production, and international linkages and consultancy

THE OCEAN SCIENCES CENTRE IS A COLD OCEAN RESEARCH FACILITY OPERATED BY

MEMORIAL UNIVERSITY OF NEWFOUNDLAND WITH FACILITIES UNEQUALLED BY ANY UNIVERSITY MARINE LABORATORY IN CANADA. LOCATED IN LOGY BAY, THE CENTRE HOUSES LABORATORIES WHERE UNIVERSITY SCIENTISTS CONDUCT RESEARCH ON TOPICS INCLUDING THE NORTH ATLANTIC FISHERY, AQUACULTURE, OCEANOGRAPHY AND MARINE ECOLOGY. THE 35 LABORATORIES, OF WHICH 22 ARE PROVIDED WITH FLOWING SEA WATER, OCCUPY 44,000 SQUARE FEET AND PROVIDE EXTENSIVE HOLDING AREAS FOR MARINE ORGANISMS AS WELL AS FACILITIES FOR MICROSCOPY, HISTOCHEMISTRY, ANALYTICAL CHEMISTRY, RADIOISOTOPE COUNTING, PHYSIOLOGICAL WORK, AND STANDARD ANALYSES FOR OCEANOGRAPHY. APPROXIMATELY 50 GRADUATE STUDENTS CURRENTLY RECEIVE RESEARCH TRAINING UNDER THE SUPERVISION OF ACADEMIC FACULTY. THERE ARE ALSO 36 TECHNICAL SCIENTIFIC STAFF, 30 SUPPORT STAFF AND A GROUP OF EDUCATION STAFF MEMBERS PROVIDING A PUBLIC AWARENESS PROGRAM IN MARINE SCIENCE. A RECENTLY CONSTRUCTED 18,000 SQUARE FOOT AQUACULTURE TECHNOLOGY BUILDING PROVIDES STATE-OF-THE-ART FACILITIES FOR CONDUCTING COMMERCIAL-SCALE R & D PROJECTS ON DEVELOPING ALTERNATIVE SPECIES FOR MARINE AQUACULTURE. THIS FACILITY CONTAINS AREAS FOR BROODSTOCK CONDITIONING, HATCHERY AND NURSERY OPERATIONS, FIRST FEEDING, AND ON-GROWING, USING TANKS, RACEWAYS AND SILOS. LIVE FOOD LABS HAVE POTENTIAL PRODUCTION OF 2000 L ALGAE, 1 BILLION ROTIFERS AND 1 BILLION ARTEMIA PER DAY. THE FACILITY IS SUPPLIED WITH WATER, FILTERED TO 89 UM, AT A MAXIMUM RATE OF 5,000 L PER MIN. EACH OF THE 13 INDIVIDUAL WATER SYSTEMS CAN BE SUPPLIED BY SURFACE WATER, DEEP WATER OR HEAT RECOVERED WATER ADJUSTED TO A SET TEMPERATURE. TEMPERATURES, FLOWS AND PUMPS ARE MONITORED BY A COMPUTER BASED MONITORING SYSTEM WHICH IS INTEGRATED WITH COMPUTER SERVICES AT THE MAIN CAMPUS AND CAN BE REMOTELY CONTROLLED BY PHONE OR COMPUTER. SPECIES CURRENTLY UNDER INVESTIGATION ARE: ATLANTIC HALIBUT, ATLANTIC COD, YELLOWTAIL AND WITCH FLOUNDER, WOLFFISH AND SEA SCALLOPS.

PRODUCTS AND SERVICES

I work at the interface of chemistry and biology in the area of aquatic lipid research. Lipids are of particular interest in marine research as they are very important energy sources in ocean (especially cold ocean) ecosystems, and some (e.g., polyunsaturated fatty acids) are essential for normal cellular function. Some lipids are also toxic to marine organisms, and all lipids are potential solvents for lipophilic pollutants like PAHs, PCBs, and DDT. They can thus provide a means of transporting pollutants through the water column and into and through food webs.

Current Research Topics include production of lipid compounds in cold ocean ecosystems, production of marker and toxic fatty acids in toxic algae and marine lipid biochemistry applied to scallop and halibut aquaculture.

PRODUCTS AND SERVICES

My interests centre on the physiological ecology of marine invertebrates, particularly bivalve molluscs such as mussels and scallops. The major focus is the response of the organism to a food supply that varies both seasonally and over the short-term (e.g., tidal cycles and storm-driven changes). Such variation is reflected in physiological rate processes such as feeding, digestion and respiration, and in the partitioning of available energy between growth and reproduction. Future work will be directed towards more sensitive estimates of the diet, especially qualitative factors that have thus far received little attention. I am also collaborating with biological and physical oceanographers at the OSC in a study of the formation and fate of the spring bloom in a large Newfoundland bay. Results to date indicate that, in some years, much of the phytoplankton production sinks to the bottom and is available to the benthos, whereas, in other years, pelagic grazers use most of the primary production, so that the organic material reaching the benthos is considerably modified. This presumably influences the nutrition of benthic invertebrates, and I am therefore investigating the energy storage and reproductive cycles of representative infaunal bivalves in order to determine whether or not events in the water column are coupled with those in the benthos

RESEARCH INTERESTS AND RECENT ACCOMPLISHMENTS
RESEARCH INTERESTS INCLUDE FISHERIES OCEANOGRAPHY, GLOBAL OCEAN ECOSYSTEM DYNAMICS, AND PHYSICAL-BIOLOGICAL MATHEMATICAL MODELING. AS HOLDER OF AN NSERC/ INDUSTRIAL RESEARCH CHAIR IN FISHERIES OCEANOGRAPHY FROM 1989 TO 1995, MY RESEARCH IS PURPOSELY FOCUSED ON SCIENTIFIC PROBLEMS OF CLEAR INTEREST TO THE FISHING AND AQUACULTURE INDUSTRIES OF ATLANTIC CANADA. THE CHAIR WAS AN ASSOCIATE MEMBER OF THE NETWORK OF CENTRES OF EXCELLENCE PROGRAM CALLED OPEN (OCEAN PRODUCTION AND ENHANCEMENT).
CURRENT PROJECTS INVOLVE: DEVELOPMENT OF COD FARMING IN COASTAL LABRADOR, SONIC TAGGING AND TRACKING AT SEA OF INDIVIDUAL FISH IN AN EFFORT TO DETERMINE MIGRATION BEHAVIOR, APPLICATION OF GEOGRAPHIC INFORMATION SYSTEMS (GIS) TO UNDERSTAND MOVEMENT OF NORTHERN ATLANTIC COD IN RESPONSE TO PHYSICAL OCEANOGRAPHIC FEATURES AND COMPUTER MODELING OF THE ROLE OF OCEANIC BIOLOGY IN CLIMATE CHANGE
